

# POLARIZER session

## 1 Introduction

---

The LCT 640 TS is more than just a 1" multi-pattern microphone. Its unique feature, the Dual Output Mode, allows you to record the front and back diaphragm via two individual outputs. Material recorded in this way can be manipulated in a unique manner.

With the POLARIZER plugin you can set the polar patterns seamlessly and in a non-destructive way, even after the recording.

Additionally, as with most plugins, you can automate it inside your DAW to fit different parts in a song structure.

### Want to learn more about the LCT 640 TS?

Visit our homepage: <https://lewitt.link/lct-640-ts>

and watch this video on Youtube: <https://lewitt.link/lct-640-ts-video>

## 2 Included files

---

- POLARIZER plugin (compatible with all DAW's)
- Unprocessed audio files recorded with the LCT 640 TS in Dual Output Mode
  - DRUM OVERHEAD
  - ELECTRIC GUITAR
  - UPRIGHT BASS
  - SPOKEN WORD BATHROOM description
  - SPOKEN WORD BATHROOM distances

## 3 How to set up the session

---

1. Install the POLARIZER plugin.
2. Import the provided audio files into your DAW on stereo tracks.
3. Insert POLARIZER on each track.
4. Listen to the tracks using different polar patterns and learn about their characteristics.  
You can instantly hear how changes affect the sound.

Have fun and feel free to share this package with fellow sound enthusiasts!
